

ZITLAS AI Food Database

Version 1

Master Index, Category Summary & Backend Import Schema

This index volume accompanies Volumes 1-3, which together contain 4,500 unique food items across 30 categories, covering Indian regional cuisine, international foods, branded/restaurant items, dairy, supplements and sports nutrition. Each item includes calories, macronutrients, fiber, sugar, sodium, vegetarian/non-vegetarian classification, allergens, suitable fitness goals, and a short description, structured for direct import into the ZITLAS AI backend.

Volume	Contents	Categories	Food ID Range
Volume 1	10 categories / 1,500 items	Indian Breakfast, Indian Lunch, Indian Dinner, Fruits, Vegetables, Dairy Products, Eggs, Chicken Dishes, Fish & Seafood	1001-1500
Volume 2	10 categories / 1,500 items	Vegetarian Protein Sources, South Indian Foods, North Indian Foods, Malaysian Foods, Gujarati Foods, Punjabi Foods	1501-3000
Volume 3	10 categories / 1,500 items	Beverages, Protein Supplements, Healthy Recipes, Weight Loss Foods, Weight Gain Foods, Sports Nutrition Foods	3001-4500

Table of Contents

- 1. Volume Map (Volumes 1-3 and Food ID ranges)
- 2. Category Summary Table (food count per category)
- 3. Data Field Definitions
- 4. Suitable Goals & Allergen Tagging Logic
- 5. JSON Schema Example (Backend Import Format)
- 6. CSV Export Notes
- 7. Methodology & Data Notes

Category Summary Table

Total unique food items across all volumes: **4,500**. Each category contains exactly 150 items.

#	Category	Number of Foods
1	Indian Breakfast	150
2	Indian Lunch	150
3	Indian Dinner	150
4	Fruits	150
5	Vegetables	150
6	Dairy Products	150
7	Eggs	150
8	Chicken Dishes	150
9	Fish & Seafood	150
10	Mutton & Meat	150
11	Vegetarian Protein Sources	150
12	South Indian Foods	150
13	North Indian Foods	150
14	Maharashtrian Foods	150
15	Gujarati Foods	150
16	Punjabi Foods	150
17	Street Foods	150
18	Fast Foods	150
19	Snacks	150
20	Desserts & Sweets	150
21	Beverages	150
22	Protein Supplements	150
23	Healthy Recipes	150
24	Weight Loss Foods	150
25	Weight Gain Foods	150
26	Sports Nutrition Foods	150
27	Hostel Foods	150
28	Restaurant Foods	150
29	International Foods	150
30	Salads and Soups	150
	TOTAL	4500

Data Field Definitions

Food ID: 4-digit unique identifier, 0001-4500.

Food Name: Name of the dish/item, including preparation style or variant where applicable.

Category: One of the 30 ZITLAS database categories.

Serving Size: Standard reference serving (e.g. 100 g, 1 bowl/150 g, 1 plate/200 g, 250 ml).

Calories: Energy in kcal per stated serving size.

Protein / Carbohydrates / Fat: Macronutrients in grams per stated serving size.

Fiber / Sugar: Dietary fiber and sugar content in grams per stated serving size.

Sodium: Sodium content in milligrams per stated serving size.

Type: Vegetarian or Non-Vegetarian classification.

Suitable For: One or more fitness goals: Weight Loss, Weight Gain, Muscle Building, General Fitness.

Allergens: Detected common allergens (Milk, Egg, Gluten, Soy, Peanuts, Tree Nuts, Shellfish/Fish, Sesame) or 'None'.

Description: One-line description of the item and its typical preparation.

Suitable Goals & Allergen Tagging Logic

Weight Loss is assigned to items in the Weight Loss Foods category, or any item with ≤ 180 kcal and ≤ 8 g fat per serving.

Weight Gain is assigned to items in the Weight Gain Foods category, or any item with ≥ 350 kcal per serving.

Muscle Building is assigned to items with ≥ 12 g protein per serving, and to all items in Protein Supplements, Sports Nutrition Foods, Chicken Dishes, Fish & Seafood, and Vegetarian Protein Sources.

General Fitness is assigned as a default tag for balanced everyday items (and always applied to Healthy Recipes, Salads and Soups, Fruits and Vegetables).

Allergen tagging is rule-based, scanning the food name for keywords associated with milk/dairy, egg, gluten-containing grains, soy, peanuts, tree nuts, shellfish/fish, and sesame. Items with no keyword matches are tagged 'None'. This is intended as a planning aid, not a clinical allergen guarantee.

JSON Schema Example (Backend Import Format)

Each record in `zitlas_food_database.json` follows the structure below, matching the format requested for ZITLAS backend import, extended with allergens and description fields used throughout this database.

```
{
  "id": 1,
  "name": "Poha",
  "category": "Indian Breakfast",
  "serving_size": "1 plate (200 g)",
  "calories": 181,
  "protein": 4.5,
  "carbs": 38.9,
  "fat": 10.7,
  "fiber": 3.1,
  "sugar": 6.0,
  "sodium": 168,
  "type": "Vegetarian",
  "goals": ["General Fitness"],
  "allergens": ["None"],
  "description": "Poha - A traditional Indian breakfast preparation
    made with grains/flour, lightly spiced and cooked with everyday
    ingredients."
}
```

Array wrapper: the full export is a JSON array of 4,500 such objects, provided as `zitlas_food_database.json`.

CSV Export Notes

zitlas_food_database.csv contains all 4,500 records as flat rows with the columns: id, name, category, serving_size, calories, protein, carbs, fat, fiber, sugar, sodium, type, goals, allergens, description. Multi-value fields (goals, allergens) are semicolon-separated within the cell. Condensed CSV-style tables (ID, Name, Category, Serving, Calories, Protein, Carbs, Fat, Type) covering each volume's 1,500 records are included as an appendix at the end of Volumes 1, 2 and 3.

Methodology & Data Notes

Food names are drawn from authentic Indian regional dishes (breakfast, lunch, dinner, South Indian, North Indian, Maharashtrian, Gujarati, Punjabi, street food), common fruits, vegetables, dairy products, proteins, and international/restaurant/fast-food items, combined with realistic preparation, portion and branding variants (e.g. Restaurant Style, Home Style, Hostel Mess Style, Low Fat, Branded) to build out the full catalogue without duplicate entries.

Nutrition values are generated using category-specific macro models (archetypes) calibrated to realistic ranges reported in standard nutrition references for each food type - for example, fried snacks fall in a higher calorie/fat band, fruits and vegetables in a lower-calorie/higher-fiber band, and curries/rice dishes in an intermediate band - with a fixed random seed per item so values stay consistent and reproducible.

Important: at this scale (4,500 items), values are realistic estimates suitable for AI diet-plan generation and general guidance, not laboratory-verified figures for any single specific product. For medical, allergy-critical, or regulatory use, values should be verified against official nutrition labels or a certified nutrition database before use.
